

Server remaining-coverage stream — evidence

Date: 2026-06-23 Scope: server/internal/{deviceemu,config,fabric} (api measured, untouched)

Coverage BEFORE -> AFTER (plain go test ./pkg/-cover)

deviceemu: 94.0% -> 97.7% config: 90.0% -> 100.0% fabric: 96.7% -> 100.0% api: 90.5% -> 90.5% (untouched, no regression)

Final per-package measured (re-run):

deviceemu: 97.7% config: 100.0% fabric: 100.0% api: 90.5%

vet + race (deviceemu, config, fabric)

go vet: CLEAN go test -race: PASS

Unreachable defensive code LEFT (deviceemu, honest §11.4.6):

emulator.go:199 Register json.Marshal(deviceRegistration) err — struct of strings, Marshal cannot fail emulator.go:203 Register http.NewRequestWithContext build err — constant POST + well-formed URL emulator.go:251 CheckUpdate http.NewRequestWithContext build err — constant GET + well-formed URL emulator.go:527 doJSON json.Marshal(body) err — unexported; all callers pass marshalable structs emulator.go:533 doJSON http.NewRequestWithContext build err — constant method + well-formed URL (config + fabric: 100% — no residual)
