

# Stream V: Re-record Frozen/Stale MP4 Recordings as Genuine Real-Time Captures

**Date:** 2026-06-20 **Status:** COMPLETED

## Summary

All 27 previously-frozen recordings were replaced with genuine real-time terminal captures showing commands being typed and output appearing. Each recording was:

1. Generated by running the actual shell command via `record_demo.py`
2. Verified via OpenCV analysis (motion detection + edge content)
3. Produced filename per SS11.4.155 (`helix_ota---<feature>---<timestamp>.mp4`)
4. Saved to `$HOME/Downloads` per SS11.4.158(D)

## Results

| Group                          | Features                                                                                | All PASS |
|--------------------------------|-----------------------------------------------------------------------------------------|----------|
| Group 1: Server API            | 8 (auth, health, artifacts, devices, deployments, groups, projects, audit)              | YES      |
| Group 2: Server API (extended) | 5 (client, deltas, recall-rollback, rollouts, telemetry)                                | YES      |
| Group 3: Submodule tests       | 7 (ota-protocol, ota-validator, ota-rollout, ota-telemetry, http3, challenges, helixqa) | YES      |
| Group 4: Build gates + tests   | 7 (prebuild, inheritance, go-tests, security, stress-chaos, codegraph, constitution)    | YES      |

## Verification

OpenCV analysis of all 27 re-recorded videos: **27/27 PASS** (live content detected)

## **Recording files**

All at \$HOME/Downloads/helix\_ota——20260620T0813\*.mp4
