

Submodule gofmt + go vet

Hygiene Sweep — Stream J

Revision: 2 Last modified: 2026-07-10T00:20:00Z

Conductor reconciliation (Rev 2 — what actually LANDED, §11.4.186 no-divergence)

The sweep was independently re-verified by the conductor (§11.4.142): every one of the 291 changed .go files satisfies `gofmt(committed) == current` byte-for-byte — a rigorous formatting-only / semantically-identical proof (the naïve `git diff -w` oracle is WRONG for gofmt, which legitimately re-line-breaks composite literals and adjusts blank lines; the gofmt-equivalence oracle is correct). Of the 7 reformatted bricks, **5 LANDED** and **2 were DEFERRED** for a pre-existing mirror divergence that predates this sweep and is an operator decision (§11.4.101/§11.4.6 — NOT resolved autonomously for a cosmetic change):

Brick	Outcome	Commit / reason
ota-protocol	landed, FF-pushed	8afc f 07 (on pinned base)
challenges	landed, FF-pushed github+gitlab	32f6ef0 (on the session's 5bac429 fix)
llms_verifier	landed, FF-pushed github+gitlab	02ac454d (0-behind base)
security	landed, FF-pushed github+gitlab	96adc8b (on converged-mirror latest 318c8c7 +2)
containers	landed, FF-pushed all	367d39d (on converged-mirror latest df980b3 +4)
llm_orchestrator	DEFERRED	github/upstream tip ee229a7 (+34) is ALREADY gofmt-

Brick	Outcome	Commit / reason
vision_engine	⏸ DEFERRED	clean (sweep = no-op); origin a484f7d has a unique commit not in github (forked mirrors). Restored to parent-pinned; no change consumed. mirrors forked (origin b417a40 has a unique commit not in github a97df79 +12); github tip still 17 files unclean, but converging a forked multi-mirror repo for whitespace is disproportionate risk. Restored to parent-pinned; no change consumed.

Parent pointers for the 5 landed bricks bumped in f7846319. The 2 deferred bricks need an operator decision on **which mirror line is canonical** before their (trivial) gofmt can land — recorded here as the follow-up, not silently dropped.

Scope

Owned Go submodule bricks under `submodules/` — EXCLUDING `submodules/helixqa` and `submodules/http3` (in-flight foreign changes, left untouched). `server/`, `clients/`, `dashboard/`, and `constitution/` were NOT touched.

Toolchain: go version go1.26.4-X:nodwarf5 linux/amd64, /usr/bin/gofmt. All changes are gofmt whitespace/alignment only (verified: struct-field column alignment; zero logic changes). No go vet findings required any code edit.

Per-module results

Module (submodules/)	gofmt- before	gofmt- after	go vet	go build	files formatted
challenges	dirty	clean	PASS (exit 0)	PASS (exit 0)	10
containers	dirty	clean	PASS (exit 0)	PASS (exit 0)	34
doc_processor	clean	clean	PASS (exit 0)	n/a (untouched)	0
llm_orchestrator	dirty	clean	PASS (exit 0)	PASS (exit 0)	6
llm_provider	clean	clean	PASS (exit 0)	n/a (untouched)	0
LLMProvider	clean	clean	PASS (exit 0)	n/a (untouched)	0
llms_verifier	dirty	clean	PASS (exit 0)	PASS (exit 0)	210
ota-artifact- validator	clean	clean	PASS (exit 0)	n/a (untouched)	0
ota-protocol	dirty	clean	PASS (exit 0)	PASS (exit 0)	1
ota-rollout- engine	clean	clean	PASS (exit 0)	n/a (untouched)	0
ota-telemetry- schema	clean	clean	PASS (exit 0)	n/a (untouched)	0
security	dirty	clean	PASS (exit 0)	PASS (exit 0)	13

Module (submodules/)	gofmt- before	gofmt- after	go vet	go build	files formatted
vision_engine	dirty	clean	PASS (exit 0)	PASS (exit 0)	17

Total files reformatted: 291 across 7 submodules.

Nested modules (own go.mod inside a brick — gofmt-touched, vetted separately)

Nested module	gofmt-after	go vet
challenges/ challenges/fixtures/ memprobe	clean	SKIP — offline dep: replace dirs ../../../../.. helix_memory and ../../../../memory do not exist (missing sibling repos, not a code defect)
llms_verifier/ examples/scoring	clean	PASS (exit 0)
llms_verifier/llm- verifier	clean	PASS (exit 0)

Note: the parent llms_verifier go vet ./... does not descend into these nested modules; they were vetted independently. llm-verifier files are counted in the 210 (gofmt is filesystem-recursive) and are part of the same llms_verifier git submodule, so a single llms_verifier submodule commit captures them.

go vet findings left for follow-up

NONE in any owned brick. All 13 top-level bricks and 2 of 3 nested modules vet clean (exit 0). The only non-clean vet is the memprobe fixture’s honest offline missing-replace-directory condition above — no product-logic vet issue anywhere; nothing was speculatively fixed.

Exact reformatted files (per submodule — for separate per-submodule commits)
