

G11 Audit Cleanup — 2026-06-08

Revision: 1 **Last modified:** 2026-06-08T00:00:00Z **Authority:** Helix OTA release engineering — gap G11 (repo public-visibility audit) **Anti-bluff:** Constitution §11.4.6 — every claim below is backed by real captured CLI output in run.log. No state is asserted that was not observed.

Summary

Two G11 audit action items resolved using the real gh / glab CLIs.

Confirmed GitHub handle

gh api user --jq .login → **milos85vasic** (authenticated GitHub account).
glab auth status → logged in to gitlab.com as **milos85vasic** (GITLAB_TOKEN).

Task 1 — CODEOWNERS handle

	Value
File	/.github/CODEOWNERS
Handle referenced (before)	@milos85vasic
Confirmed correct handle	milos85vasic
Handle referenced (after)	@milos85vasic (unchanged)
Outcome	NO CHANGE NEEDED — CODEOWNERS already correct; file left untouched.

Task 2 — GitLab mirror visibility (policy: PUBLIC)

Repo	Before	Action	After (verified by fresh read)
vasic-digital/ containers (G11-A1)	private	glab api -X PUT projects/ vasic-digital%2Fcontainers -f visibility=public	public
vasic-digital/ HelixConstitution (constitution GitLab mirror)	private	glab api -X PUT projects/ vasic- digital%2FHelixConstitution -f visibility=public	public

Both flips were verified with a fresh independent glab api projects/... read after the PUT (not trusting the PUT response alone). Both report visibility: public.

Note: the constitution's canonical origin per .gitmodules is GitHub (HelixDevelopment/HelixConstitution, already PUBLIC). vasic-digital/HelixConstitution on GitLab is the mirror flagged private by the audit (repo_audit.md line 64).

Resulting state

- Confirmed GitHub handle: **milos85vasic**
- CODEOWNERS: **unchanged** (was already correct)
- vasic-digital/containers GitLab mirror: **public**
- vasic-digital/HelixConstitution GitLab mirror: **public**

No OPERATOR-BLOCKED items — glab was authenticated, both paths resolved, and the token had permission to update both projects.

Scope discipline

Only docs/qa/20260608-g11-cleanup/ was created. CODEOWNERS was inspected but not modified. No commit was made. No server/, go.mod, .git internals, or submodule source was touched.
