

Helix OTA â€” Fixed (closed workable items)

Revision: 2 Last modified: 2026-06-10T18:30:00Z

This is the canonical closed-archive tracker (Â§11.4.19 column alignment, Â§11.4.33 type-aware closure vocabulary, Â§11.4.54 ATM-NNN). Open items live in [Issues.md](#); the short-form companion is [Fixed Summary.md](#). Sorted closure-date DESC. All commit hashes below were read from `git log`, not invented.

Â§1. [ATM-001] Telemetry deployment_id not derivable from otaprotocol.UpdateAvailable

Status: Fixed (â†’ Fixed.md) Type: Bug

Closed 2026-06-10 â€” commit 3c57867 feat(api): close 2 protocol gaps â€” UpdateAvailable.deployment_id + GET /deployments. The ota-protocol UpdateAvailable payload now carries the deployment_id field, wired through the serverâ€™s update-check response, so a real device can obtain and echo back the deployment_id its telemetry must supply (previously the server required it but the protocol never told the device). Proven by TestEmulatorSelfServesDeploymentID â€” the Tier-1 emulator round-trips register â†’ update-check â†’ telemetry self-serving the deployment_id end-to-end.

Â§2. [ATM-002] No GET /deployments list endpoint to enumerate deployments

Status: Implemented (â†’ Fixed.md) Type: Feature

Closed 2026-06-10 â€” commit 3c57867 feat(api): close 2 protocol gaps â€” UpdateAvailable.deployment_id + GET /deployments. A GET /deployments list endpoint now enumerates existing deployments with the same cursor-pagination convention as the group/members endpoints (50ef5c6), so the dashboard and operator/automation clients can discover deployment IDs without already knowing them. Proven by TestDeploymentListReturnsActive â€” the list endpoint returns the active deployments.

Â§5. [ATM-005] Per-device telemetry filters (?event / ?since / ?until)

Status: Implemented (â†’ Fixed.md) Type: Feature

Closed 2026-06-10 â€” commit 50ef5c6 feat(api): per-device telemetry filters + group/members pagination. Per-device telemetry endpoint now accepts ?event, ?since, ?until query filters; OpenAPI synced (redocly-clean).

Â§6. [ATM-006] Group + group-members cursor pagination

Status: Implemented (â†’ Fixed.md) **Type:** Feature

Closed 2026-06-10 â€” commit 50ef5c6 feat(api): per-device telemetry filters + group/members pagination. Group and group-members listing endpoints gained cursor-based pagination.

Â§7. [ATM-007] Dashboard API client synced to new pagination/filter params

Status: Completed (â†’ Fixed.md) **Type:** Task

Closed 2026-06-10 â€” commit b0b8ee2 chore(dashboard): sync API client to new pagination/filter params. Dashboard API client brought into lockstep with the new telemetry-filter + pagination parameters (ATM-005/ATM-006).

Â§8. [ATM-008] Tier-1 Go OTA device-emulator

Status: Implemented (â†’ Fixed.md) **Type:** Feature

Closed 2026-06-10 â€” commit 7dc3334 feat(emulator): Tier-1 Go OTA device-emulator + resilience for new handlers. A Go device-emulator (server/internal/deviceemu + cmd/ota-device-emu) that speaks the real ota-protocol to the control plane; surfaced the telemetry deployment_id protocol gap now tracked as ATM-001.

Â§9. [ATM-009] Comprehensive dashboard UI testing system

Status: Completed (â†’ Fixed.md) **Type:** Task

Closed 2026-06-10 â€” commit fa571b8 test(dashboard): comprehensive UI testing system for all panels. UI test suite covering all dashboard panels (Vitest + Playwright + ally).

Â§10. [ATM-010] Autonomous e2e + security + HelixQA for telemetry filters & pagination

Status: Completed (â†’ Fixed.md) **Type:** Task

Closed 2026-06-10 â€” commit a839220 test(qa): autonomous e2e + security + HelixQA for telemetry filters & pagination. Autonomous end-to-end + security suites + HelixQA bank covering the ATM-005/ATM-006 telemetry-filter and pagination work.
