Repository Public-Visibility Audit (Gap G11)

Revision: 1 **Last modified:** 2026-06-08T00:00:00Z **Authority:** Helix OTA release engineering — gap G11 (owned submodule + dependency repo visibility) **Scope:** GitHub org HelixDevelopment + GitLab group helixdevelopment1 for the 6 owned ota-* submodules; plus parent repo and the http3 / containers / constitution dependencies. **Method:** every cell is populated from a REAL CLI call (gh repo view, glab api projects/...) captured 2026-06-08. No assumptions (Constitution §11.4.6). Project policy: owned + dependency repos MUST be PUBLIC.

table_of_contents

environment_and_auth

Tool	Path	Auth	Account
gh	/opt/homebrew/bin/gh	✓ logged in github.com	milos85vasic (scopes: repo, read:org, admin:public_key, gist)
glab	/opt/homebrew/bin/glab	✓ logged in gitlab.com (GITLAB_TOKEN env)	milos85vasic

Both CLIs are authenticated — GitLab checks are REAL, not SKIPped.

Source-of-truth note: `.gitmodules` declares the constitution submodule as `git@github.com:HelixDevelopment/HelixConstitution.git` (repo name **HelixConstitution**, not `constitution`) and the deps `http3` + `containers` under org **vasic-digital**. The audit was corrected to the real repo names/orgs after reading `.gitmodules`.

owned_ota_submodules

Repo	GitHub exists?	GitHub visibility	GitLab exists?	GitLab visibility	Policy
ota-protocol	YES	PUBLIC	YES	public	OK
ota-telemetry-schema	YES	PUBLIC	YES	public	OK
ota-artifact-validator	YES	PUBLIC	YES	public	OK
ota-rollout-engine	YES	PUBLIC	YES	public	OK
ota-update-engine-bridge	YES	PUBLIC	YES	public	OK
ota-android-agent	YES	PUBLIC	YES	public	OK

All 6 owned `ota-*` submodules exist and are PUBLIC on BOTH GitHub (HelixDevelopment/<name>) and GitLab (helixdevelopment1/<name>). No action needed.

parent_repository

Repo	GitHub exists?	GitHub visibility	GitLab exists?	GitLab visibility	Policy
helix_ota	YES (HelixDevelopment)	PUBLIC	YES (helixdevelopment1)	public	OK

dependency_repositories

Repo	Declared origin (.gitmodules)	GitHub exists?	GitHub visibility	GitLab exists?	GitLab visibility
HelixConstitution	HelixDevelopment/ HelixConstitution	YES	PUBLIC	YES helixdevelopment1/ helixconstitution	public

Repo	Declared origin (.gitmodules)	GitHub exists?	GitHub visibility	GitLab exists?	GitLab visibility
http3	vasic-digital/ http3	YES	PUBLIC	YES vasic- digital/http3	public
containers	vasic-digital/ containers	YES	PUBLIC	YES vasic- digital/containers	private

Notes on dependency namespace reality (from real CLI): - HelixDevelopment/constitution, vasic-digital/constitution — DO NOT EXIST on GitHub (404). The canonical name is HelixConstitution. - helixdevelopment1/containers and helixdevelopment1/http3 — DO NOT EXIST on GitLab (404). The deps live under vasic-digital/* on GitLab, matching .gitmodules. - vasic-digital/HelixConstitution on GitLab exists but is **private** (a mirror; the canonical constitution origin per .gitmodules is GitHub, which is PUBLIC).

evidence_commands

GitHub (per repo):

```
gh repo view HelixDevelopment/<name> --json
name,visibility,isPrivate,url
gh repo view HelixDevelopment/HelixConstitution --json
name,visibility,isPrivate,url
gh repo view vasic-digital/http3 --json
name,visibility,isPrivate,url
gh repo view vasic-digital/containers --json
name,visibility,isPrivate,url
```

GitLab (per repo):

```
glab api projects/helixdevelopment1%2F<name>
glab api projects/vasic-digital%2Fhttp3
glab api projects/vasic-digital%2Fcontainers
glab api projects/helixdevelopment1%2Fhelixconstitution
```

Real captured output (verbatim, 2026-06-08):

```
GH ota-protocol ->
{"isPrivate":false,"visibility":"PUBLIC","url":".../ota-protocol"}
GH ota-telemetry-schema ->
{"isPrivate":false,"visibility":"PUBLIC"}
GH ota-artifact-validator ->
{"isPrivate":false,"visibility":"PUBLIC"}
GH ota-rollout-engine ->
{"isPrivate":false,"visibility":"PUBLIC"}
GH ota-update-engine-bridge->
{"isPrivate":false,"visibility":"PUBLIC"}
GH ota-android-agent ->
{"isPrivate":false,"visibility":"PUBLIC"}
GH helix_ota ->
{"isPrivate":false,"visibility":"PUBLIC"}
```

```

GH HelixConstitution      ->
{"isPrivate":false,"visibility":"PUBLIC"}
GH vasic-digital/http3    ->
{"isPrivate":false,"visibility":"PUBLIC"}
GH vasic-digital/containers->
{"isPrivate":false,"visibility":"PUBLIC"}
GH HelixDevelopment/constitution -> 404 (does not exist)
GH HelixDevelopment/http3    -> 404 (does not exist)
GH HelixDevelopment/containers -> 404 (does not exist)

GLAB helixdevelopment1/ota-protocol      -> visibility:

Found
GLAB vasic-digital/constitution                -> 404 Project Not
Found

```

action_items

ID	Severity	Repo / Host	Finding	Required action
G11-A1	Medium	vasic-digital/ containers (GitLab)	GitLab mirror is private while GitHub origin is PUBLIC	Make the GitLab vasic-digital/ containers repo PUBLIC to match policy, OR document it as a deliberate non- public mirror (GitHub is the canonical PUBLIC origin per .gitmodules).
	Low			

ID	Severity	Repo / Host	Finding	Required action
G11-A2		vasic-digital/ HelixConstitution (GitLab)	GitLab mirror is private ; canonical constitution origin is GitHub (PUBLIC)	Confirm whether a PUBLIC GitLab constitution mirror is required. The canonical constitution origin (HelixDevelopment/HelixConstitution, GitHub) is PUBLIC, so policy is satisfied at the source-of-truth host; the GitLab private copy is informational only.

No owned ota-* submodule is missing or private on either host — zero action items for the 6 owned repos.

anti_bluff_unverified_register

Item	Status	Reason
GitLab auth	VERIFIED	glab auth status → logged in as milos85vasic; all GitLab queries returned real API JSON (public/private/404), not auth failures.
GitFlic / GitVerse mirrors	UNVERIFIED	Project policy mentions 4 upstreams (GitHub + GitLab + GitFlic + GitVerse). This audit covered only GitHub + GitLab (the two requested hosts + available CLIs). GitFlic/ GitVerse were not queried — no CLI available in this environment. Out of G11 scope as specified.
GitLab helixconstitution casing	NOTED-AS-FACT	GitLab normalized the path to lowercase helixdevelopment1/helixconstitution (GitLab project paths are case-normalized); the repo exists and is public.
