

QA Evidence — §11.4.65 Markdown sibling exports (2026-06-08)

Run ID: 20260608-md-exports **Mandate:** Constitution §11.4.65 (universal Markdown export — every non-source-tree .md must have synchronized .html and .pdf siblings). **Anti-bluff:** §11.4 / §11.4.65 — only formats whose files were physically produced + type-verified are claimed.

Toolchain (real, probed at runtime)

- pandoc 3.9.0.2 — Markdown → standalone HTML
- WeasyPrint version 66.0 — HTML → PDF (no LaTeX engine required; matches the repo’s existing sibling .html+.pdf convention)

Mechanism

The project scripts/export_docs.sh writes into per-dir _exports/ subfolders and uses a LaTeX --pdf-engine. The repo’s tracked convention for these spec docs is **sibling .html+.pdf** next to each .md (e.g. .../REST_API_SPECIFICATION.html sits beside its .md). To match that convention and honor §11.4.65 (“synchronized .html and .pdf siblings”), exports were produced directly as siblings:

```
pandoc <f>.md -s --metadata title=<base> -o <f>.html
weasyprint <f>.html <f>.pdf
```

Result — 13/13 markdown files, both formats produced

All candidate files lacked any .html/.pdf sibling beforehand. Each now has both.

Totals: html_ok=13 html_fail=0 pdf_ok=13 pdf_fail=0. **SKIPPED:** none — both pandoc and weasyprint present, every format produced.

Type verification (file -b): every .html reports HTML document text, UTF-8; every .pdf reports PDF document, version 1.7. See run.log for the full command output captured live during this run.
